

Redesign of Level Zero

For most passengers and airport employees, level 0 is the gate to Frankfurt airport. From the parking facilities and from the train station, it gives you access to the departure halls of the terminal 1. Although located underneath the airport, the lighting system will create a daylight atmosphere. Light gates will give the marketplace structure and will set optical accents.

The offer is catering especially for the needs of the employees of the airport and the airlines. Here, they will find their daily needed things, such as a supermarket, dry cleaners and convenience stores. The food & beverage services also follow this concept, with the restaurant Himmel & Erde (heaven and earth) and a food court. Of course, the offer is also attractive to our passengers. Trendy shop concepts offer fashion & lifestyle with a mid range price level.

Also located in the Airport City Mall is the car rental center.
